

TANGOE'S UNIFIED ENDPOINT MANAGEMENT SERVICES

Tangoe UEM centralizes UEM and mobility program data into one platform to simplify the complexity involved in supporting, managing and securing all mobile device operating systems as well as MacOS and Windows 10 connected endpoints.

- ✓ Planning for UEM success
- ✓ Deploying your UEM platform
- ✓ Managing your UEM program

Tangoe UEM services increase the value of your UEM spend through:

Security and Compliance

Tangoe UEM configures dynamic security and compliance policies based on user role. This ensures security without impacting usability.

User Group Management

Tangoe UEM configures your UEM system dynamically based on user roles and functions within your organization.

Platform Management and Testing

Tangoe UEM handles all UEM platform management tasks. Tangoe will design all aspects of your UEM system and provide tier 2, 3 and Sr support of the platform. This includes policy and configuration management, compliance, testing and upgrading platforms to new versions.

Application Management

Design, deploy and manage secure enterprise apps through a UEM-specific store that restricts access and controls user behavior from the same software you use to manage the rest of your mobility program.

Corporate Data Management

Tangoe UEM ensures secure corporate data on devices. Tangoe designs Data Loss Prevention (DLP) controls that encrypt data at rest and data in motion. Data compliance is also enforced based on device enablement security requirements.
