

Tangoe Atlas™

Reduce IT costs, improve productivity, and drive predictable results with the only TEM solution built to optimize all of the technology your organization deploys.

Tangoe Atlas™ revolutionizes the way businesses manage, measure, and track their technology assets and expenses.

With Atlas, you can custom configure your user experience so you can meet your immediate needs faster with less development for a greater ROI.

Key Benefits and Features:

- Advance work steps and processes with accuracy and efficiency using a configurable, real-time workflow engine with powerful assignment capabilities to accelerate your expense management automation
- Manage expenses for any asset by choosing from the most common industry assets in the most comprehensive library, or easily create your own to reduce costs across your whole IT environment
- Get up and running quickly with access to dynamic, easy-to-use templates for workflows, procurement, invoicing, assets, transactions, and more for the quickest time-to-value in the market
- Forecast your future expenses through powerful analytics to facilitate informed decision making for logical next-step triggers
- Enable end users to proactively manage assets, spend, and requests with the intuitive employee portal that provides employees with the tools they need to take ownership as appropriate

Innovative Architecture

Remove hurdles with a service oriented architecture that can support multiple deployment models

Modern Technology

Get best practices from an enterprise-grade cloud-based solution backed by business intelligence

Customer Driven

A system built for you and designed for managed mobility, fixed telecom, cloud, IoT, and any type of future domain with 24x7 support

- Get visibility into expenses, invoicing, and cost savings opportunities as well as advanced SLA reporting with business intelligence and reporting tools that provide a full view of all your technology spend
- Improve productivity and integrate Atlas into any website or application with one of the deepest API libraries for a seamless technology interaction
